

PRESS RELEASE

For Immediate Release

Radon

Winter is a great time to test your home for radon!

Radon is an odorless, colorless gas that can build up in the lower levels of any home, especially during winter months. Radon gas exposure is the second leading cause of lung cancer in Iowa. If you have not tested your house for radon in the past 2 to 3 years or if you have installed a new heating system since the last test, your house is due for a radon check up! Stop by your city office or Community Health Partners for a radon test kit. Testing is easy to do and kits only cost \$10. Instructions on how to do the test as well as get results at home are included. For more information about radon, visit www.epa.gov/radon. Test your house to ensure you and your family are protected!

Community Health Partners of Sioux County is committed to promoting and protecting the health of all Sioux County Residents.
